FISH & SEAWEED

ExcelCrop Pure Fish and Seaweed Blend is a great liquid fertilizer for various farm, horticulture and home garden applications.

This specialty blend contains the benefits of the Fish Fertilizer, with the added benefit of seaweed which is loaded with carbohydrates which plants use as a building block.

This product may be applied as a soil conditioner through a fertigation system or as a foliar spray.

- Over 60 different species of Seaweed and Kelp
- Contains alginic acid and mannitol, which are carbohydrates with chelating ability.
- Contains four primary hormone types: Auxins, Cytokinins, Betaines and Gibbelerins - all essential for plant health, vitality and heat stress

Filtered to 100 microns, suitable for all types of irrigation and spray systems.

ExcelCrop Fish and Seaweed Blend is contributing to improved productivity and profits on farms and commercial enterprises throughout Australia.

100% Australian Made

Scientifically Developed Concentrate

- 80% fish fertiliser // 20% seaweed concentrate
- Contains highly soluble protein nitrogen level
- Provides a healthy balance of all 18 essential minerals
- Significantly increases soil biology and crop health
- Reduced odour
- Developed by CSIRO
- Certified Organic SXC 25193

Ensure that you look after and maximise your most important resource - your soil.

Using ExcelCrop ensures that you are getting the maximum yields from your soil now and in the future.

HOW TO APPLY

General use: Dilute with water and apply with a spray or drip watering system. Apply at 5-10 l/ha.

Use stronger application early in the season and weaken for subsequent applications.

Apply to run-off as a foliar spray or via drip system.

Use regularly through the growing season until one week prior to harvest.

For pasture, apply 10-20 l/ha twice annually, diluted with water to suit.

For hand spraying systems of small plots and home use, we suggest a dilution of 1:100 with water.

For stronger growth for established plants use at 1:50 early in the season.

For watering in seedlings use at 1:200
